N.B. the dates in red are estimated dates

*ADIS Reference is a unique identification code automatically created by the EU Animal Disease Information System (Regulations (EU) 2016/429 e 2020/2002) when Competent Authority of each Member State notifies an animal disease outbreak. The actual number of outbreaks is the one indicated in the first column of the table.

§ The boundaries of the protection and surveillance zones and the date on which the measures applied will be lifted, were decided according to [art 21 point 2](#) 'The competent authority shall adapt the boundaries of the initial restricted zone, including the boundaries of the protection, surveillance and the further restricted zones, in the case of the overlapping of two or more restricted zones due to further outbreaks of the category A disease.', and [art 39 point 1 a\) and b\) of the Commission Delegated Regulation \(EU\) 687/2020](#) 'The competent authority may lift the measures provided for in Section 1 and 2 of this Chapter only if the minimum period set out in Annex X has elapsed and the following conditions are fulfilled:

- (a) the preliminary cleaning and disinfection and, where relevant, control of insects and rodents, has been performed in accordance with Article 15 in the affected establishment; and
- (b) in all establishments keeping animals of listed species in the protection zone, animals of listed species have undergone, with favourable results, clinical and when necessary laboratory examinations in accordance with Article 26.' The amendments to these zone will be published regularly with the Commission Implementing Decision (EU) 2021/641.

¥ After carrying out a risk assessment for the further spread of HPAI in the area, the competent authority decided to grant a derogation according to Art. 21 paragraph 3 point (a) of the EU Delegated Regulation 2020/687 and did not establish a restricted zone
